Dr. Choukroun Soft Brushing Kit

Before Brushing

After Brushing

- This kit was designed by Dr. Joseph Choukroun to extend the flap without the need for incision
- The concept of this product is to disorganize the collagen fibers of the fibrous periosteum
- This reduces the stiffness of the flap allowing the flap to release farther
- This kit does not cut anything at all
- The flap is released as a result of the separation of the periosteum fibers

Techniques

There are two brushing methods that can be used:

- Soft pressure and moderate pressure. When moving Apically to Coronally you want to brush softly
- When moving Coronally to Apically you want to apply more pressure when brushing
- You can begin brushing when the full thickness of the flap is elevated, making sure to brush as deep as possible
- Pull the flap back with forceps and start brushing with the small size (regular or angulated for the posterior area)
- After the first release you can use the medium or large for large flap areas
- This allows you to extend the flap significantly with minimal trauma
- In the lingual flap, it is very easy to separate the mylohyoid muscle very gently by just by brushing
- It is also possible to brush the periosteum of the lingual flap
- Take the headache out of flap surgery, and increase your ability to gain primary closure with the ST-UP Soft Brushing Kit

Components

Kit Includes 5 Instruments:

- (1) Regular Tip
- (1) Angulated Right Tip for use in the Posterior
- (1) Angulated Left Tip for use in the Posterior
- (1) Medium Tip
- (1) Large Tip

Magnetic Mallet

The Magnetic Mallet

- Designed to be used in dentistry surgery and implantology, this device gives the surgeon a series of options for all advanced bone augmentation procedures such as sinus lift, split crest and ridge expansion, and avoids the use of milling and drills
- The Magnetic Mallet stems from the development of Summers' osteotome technique, retaining all its advantages and removing all the drawbacks and inconveniences of this manual practice
- It comes with a range of specific instruments that simplify the extraction of roots, implants and impacted teeth, enabling the alveolar integrity preservation
- With the Magnetic Mallet, surgeons can operate with greater visibility and control, preserving the bone and ensuring the greatest possible comfort for the patient both in complex implant surgeries and simple extractions
- This is why Magnetic Mallet innovative, safety and ergonomic features make it such a versatile device, enabling the majority of surgical practices to be performed more easily, safely and quickly while still achieving satisfying and expected results

Advantages for the Patient

- Detachable Handpiece
- No more BPPV disorder
- Less trauma during surgery
- Faster recovery
- No bone loss
- Poor bone quality is improve

Advantages for the Surgeon

- Better visibility and control
- Simplified bone augmentation procedures
- Precision positioning and alignment of osteotomes
- Higher initial implant stability
- Limitation of bone milling
- More implant sites
- No need to perform sinus lifts with Caldwell-Luc
- Alveolar integrity preservation
- Better access to the posterior maxilla
- Simplified lower jaw surgery
- Faster techniques
- Assisted implant insertion

How does the Magnetic Mallet Work?

- The Magnetic Mallet exploits an electronically operated electromagnetic collision between two masses, which allows a high-intensity impact to be applied exceedingly quickly; this produces an elastic wave, followed by a certain amount of motion, which creates an inelastic shock wave on the bone
- This facilitates plastic deformation
- The Magnetic Mallet is designed to apply four forces of different strengths from minimum (force number 1) to maximum (force number 4)

Wide Range of osteotomes and instruments

- Magnetic mallet is equipped with a kit of 10 instruments in its standard configuration, but a wide range of optional bone expanders/osteotomes, cutters and surgery instruments is available
- All the instruments were designed in collaboration with a group of experts and are the result of years of clinical tests and relevant feedback
- All the instruments are available both in an autoclavable tray and separately

Standard Kit Contents

Control unit	Kit of 10 instruments
Handpiece	Box of Swann-Morton SM64 blades
Cable	Autoclavable tray for instruments
Power supply	Case
